Hotel and building automation solutions for energy efficient installations

Nr. 7

Table of Contents

e-controls®
electronic intelligent controls, s.l.

Dear customer,

The catalogue in your hands reflects one more year the commitment of E-Controls with the innovation to keep the company as a competitive and active firm, adapting day by day the catalogue to the new customer requests and bringing constantly novelties for the hotel market and office building, where the technology and automation are every day more needed and visible.

This new edition of the catalogue covers a broad set of equipment for **climate** and **lighting** control for hotels and buildings. Some of the innovations of this year are based in a wider range of climate controllers, basically of the families ***e-Room Modbus, e-Room Plus Stand-Alone*** and ***e-Room Controller Modbus***, with more functionalities and new input/output configurations which adapts to multiple kind of installations. Also the new noiseless motion sensors ***e-Sensor Noiseless*** and ***e-Detector Noiseless*** with models to operate at 12-24V or 95-250Vac, specifically designed for hotel rooms to prevent any operating sound. Within the multisensor device group for lighting energy saving we present the new patent for the ***e-Multisensor AutoDim DALI*** and ***e-Multisensor Bus DALI*** products, which include an adjustable motion detection system that provides the possibility to install the device in an open space or a corridor, that avoids detections from adjacent zones, providing a highly competitive solution for DALI installations. Finally and also in the multisensors section, we present the ***Multilux DALI***, a new multisensor designed to operate in high bay installations like logistic plants and warehouses.

Following our product development strategy we continue to supply the market with solutions that are open system based and include the main standard protocols, such as BACnet, LonWorks, KNX, Modbus, DALI, M-Bus or EnOcean, which allow us to create turnkey projects and to provide our customers with increasingly satisfactory solutions.

Being aware that internet is an essential tool for our customers, we present this year a new version of our website, with the latest HTML5 technology, including many novelties in the graphical design part and product menus, more accessible and user friendly that will help the user to find the products more easily and faster.

Do not hesitate to contact us to ask for any additional information that might be of your interest and we look forward to have your inputs to develop any project that you may be envisaging.

Clima | e-Thermo

Climate Thermostat for Fan-Coil rooms

Optional remote control with Modbus protocol

e-controls® electronic intelligent controls, s.l.

DATASHEET

ET.600501-001

Design and control in a single device

e-Thermo is a Fan-Coil controller thermostat with an elegant aesthetic and innovative design which provides a modern and updated view on any kind of installation. The device is equipped with some performance and operating features which makes it particularly indicated for hotels, office buildings and retail installations since it includes different configuration parameters that make it flexible and adaptive to any requirement.

A white backlit LCD display allows an easy-to-read screen and different icons view. By means of four easy to understand pushbuttons, the user can control the device according to the requirements at any time.

Maximum and minimum temperature user setpoints can be configured on the device, among the maximum and minimum operating temperature setpoints to improve on the installation energy savings. It also has a parameter to set a maximum release temperature which allows to automatically activate the device and climates a zone when it raises a preconfigured value.

The device is available in two different models for two pipes or four pipes installations and in addition it is available with Modbus RTU communication to monitor and remote control the device and easy integrate it in a global control building network.

Innovative aesthetic design

Stand-alone operation

Configurable 2 pipes / 4 pipes

Max/min configurable setpoints

Modbus RTU optional

Energy Saving

- Max/min user setpoints
- Max/min real setpoints
- Three fan-coil speeds to adapt to each temperature
- Remote BMS control to switch off at programmed times

Device Configuration

- Celsius/Fahrenheit display
- 1 or 3 Fan-coil speeds selection
- Fan-coil state on no demand
- Temperature/setpoint visualization
- Max/min user setpoints
- Max/Min real setpoints
- Auto On for Temperature
- Device state after reset
- Heat/Cool mode switching
- NO/NC valves
- Brightness display level
- Modbus baud rate and parity (bus model)

Installation

- A single device per zone
- Less installation time
- Improved maintenance

Features

- Supply voltage: 24Vac/Vdc
- Stand-alone operation
- Bus BMS: Modbus RTU (RS-485) (model ET.670501-001)
- Ambient temperature sensor on front panel
- White backlight LCD display
- 4 pushbuttons
- Relay outputs (5Amp):
  - Three Fan-Coil speeds (3 outputs)
  - Heat-Cool valve actuator / Cool valve actuator (2P/4P)
  - Heat valve actuator (4P)
- Flush mounting
- BTicino Light / LightTech frame
- Dimensions: 142x85x42mm
- Weight: 130gr.

Clima | e-Room® Stand-Alone

Stand-alone room climate control for fan-coil applications

Temperature Setpoint Control Based on Zone Occupancy

DATASHEET

e-controls® electronic intelligent controls, s.l.

RC.604505-000

Application:

1 Hotel 2 Pipes / 4 Pipes lighting contact

Climate control at an optimal cost

The e-Room® Stand-Alone device is a stand-alone fan coil controller designed to cover the demands of hotels and offices where a sophisticated remote control system for room management is not required. The device includes a set of inputs and outputs that provide zone climate control based on occupancy and window position, thus allowing significant energy savings that dramatically reduce electricity costs in buildings.

e-Room® Stand-Alone includes a temperature sensor on its front panel that provides room temperature measurement and Heat/Cool valve actuation as appropriate; fan coil speed is controlled to cover the energy demand. An analog input is also included to connect an external temperature sensor, used in installations where temperature is measured at the return point.

The device includes a large blue backlit display screen that provides the user with an optimal visualization, in addition to user-friendly pushbuttons for simple and effective control. Device configuration is accomplished through the pushbuttons and the display screen; up to 24 different parameters may be adjusted in order to set the device as required.

Stand-alone control for low-cost installations

Occupancy based climate control

Designed for 2 pipe and 4 pipe systems

A single control device for each zone

Auxiliary lighting output

Energy Savings

- Up to 20% zone energy savings
- Occupancy based temperature setpoint change
- Window contact stops operation
- Configurable Max/Min setpoints
- Dual ON/ECO setpoint
- ECO mode on unoccupied zone

Device Configuration

- Celsius/Fahrenheit display
- 1 or 3 fan coil speeds selection
- Fan coil state on no demand
- Device on OFF or ECO on unoccupied zone
- Heat/Cool mode switching
- 2 pipe / 4 pipe system
- Keycard switch contact or lighting input
- Heat/Cool deadband
- Occupied/ECO state setpoints
- Device state after reset
- Heat/Cool device startup
- NO/NC valves

Patented product
Registered design

Installation

- A single device per zone
- Less installation time
- Improved maintenance
- No communication bus required

Features

- Stand-alone climate control
- Room temperature sensor on front panel
- Blue backlit LCD screen
- 4/5 pushbuttons
- Digital inputs (dry contact):
  - Keycard switch contact / lighting contact
  - Window contact
- Analog inputs (NTC10K):
  - Water temperature sensor
  - External temperature sensor
- Relay outputs (5 Amp):
  - Three Fan-Coil speeds (3 outputs)
  - Cool valve (4 pipes) / H-C (2 pipes)
  - Heat valve (4 pipes) / Lighting
- Supply voltage: 24 Vac / 24 Vdc
- BTicino Light / Light Tech frame (different colors available)

Clima | e-Room® Panasonic

Room climate control for VRF applications

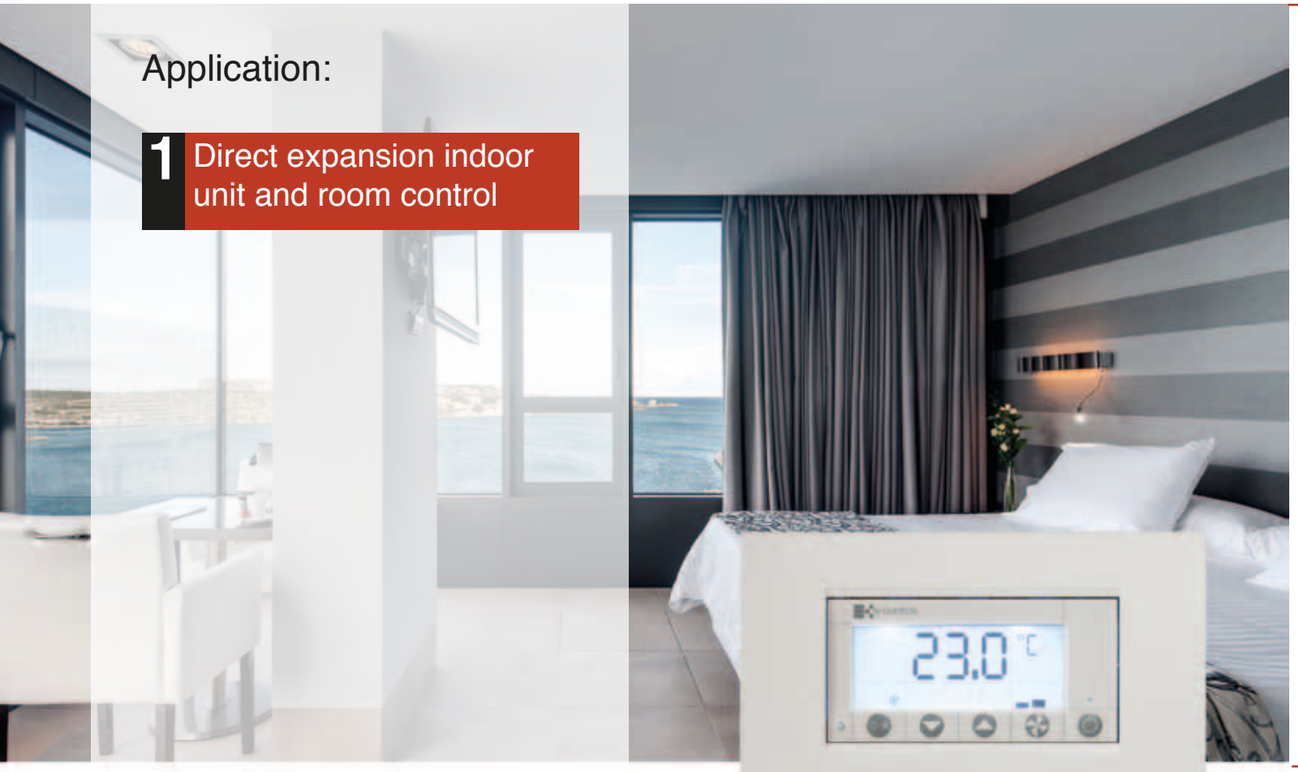
Indoor unit control for optimized installation management

DATASHEET

e-controls® electronic intelligent controls, s.l.

Application:

1 Direct expansion indoor unit and room control



RV.004401-000

Direct expansion system control and room management in a single device

The e-Room® Panasonic room climate controller, specially designed for hotel installations, provides direct control of a direct expansion indoor unit without the need for gateways. The device includes inputs and outputs to optimize room energy consumption by operating climate, lighting and motorized blind or curtain controls based on room occupancy.

Four operating modes are available to adapt device inputs and outputs to the requirements of each installation. Depending on the selected option, room occupancy may be monitored through a keycard switch contact or a motion detector in order to drive climate control, lighting or curtains based on room occupation. The device includes also a window contact input that will temporarily stop climate control operation, in addition to a temperature sensor that will control a secondary climate zone through a valve actuator output.

e-Room® Panasonic is available in two product models: one model for stand-alone operation with no communication bus, and another model with a Modbus or LonWorks communication bus that allows integration into a building management installation for remote climate control.

Direct indoor unit control

Climate, lighting and curtain management

Comprehensive control for maximum savings

Remote climate control activation

May be integrated into a BMS

Energy Savings

- Climate and lighting control OFF when room is unoccupied
- Climate control ON/OFF through window contact
- Occupancy based temperature setpoint
- Dual Comfort/ECO setpoint for Heat/Cool
- Dual configurable user and operating setpoints
- Temperature sensor for secondary zone

Indoor Unit Control

- Direct e-Room® control
- Available functions: ON/OFF, Setpoint modification, Fan-Coil speed (I-II-III-AUTO), Heat/Cool

Device Configuration

- Celsius/Fahrenheit display
- Fan coil position on no demand
- Device on OFF or ECO on no occupation
- Heat/Cool mode change
- Occupancy detection through keycard switch or motion detector
- Setpoint for Occupied/ECO
- Secondary zone setpoint offset

Features

- Indoor unit control
- No bus or remote control bus options
- Ambient temperature sensor
- Blue backlit LCD screen
- Four installation based operating modes
- Three digital inputs (dry contact):
  - Keycard switch/Motion detector/ Lighting contact
  - Window contact
  - Blind raise-up pushbutton/Door contact
- One analogue input (NTC10K):
  - Blind lower pushbutton/External temperature sensor
- Four output relays (5 Amp):
  - Courtesy light
  - Lighting breaker
  - Blind raise-up motor
  - Blind lower motor/Secondary zone valve
- Alarm indication on display screen
- Alarm reporting via bus
- Supply from indoor unit bus
- BTicino Light / Light Tech frame

Installation

- Single device per zone
- Reduced installation time
- Improved maintenance

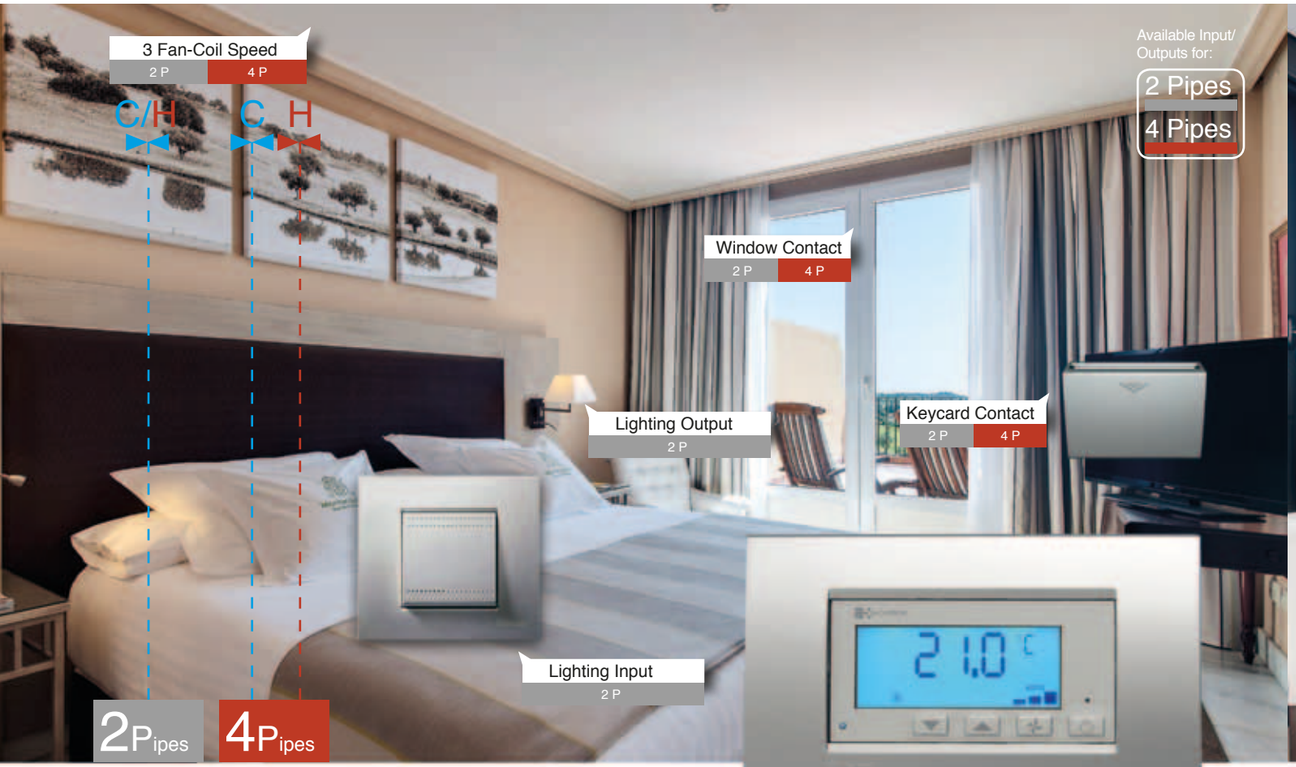
Clima e-Room® Stand-Alone

Stand-alone room climate control for fan-coil applications

1 Application Hotel 2 Pipes / 4 Pipes lighting contact



RC.604505-000

Climate control at an optimal cost

On the e-Room Stand-Alone model, the device is enabled when the card is inserted, allowing the guest to connect the HVAC system and change the setpoint as desired. In two pipes system, the device can be configured to operate also over the room lighting system, switching it on and off when the room becomes occupied or unoccupied, but also over the courtesy light, working as above but automatically switching the lights off after a configurable timeout.

The product is including up to 24 different parameters to configure the device according to the specifications of the installation, like two or four pipes system and some other options. As the product operates in stand-alone mode, the device can be configured to start-up after a power reset, in heating or cooling mode. The device can automatically start the HVAC system if the guest is in the room, even a power loss has been done at night. Some other parameters like change to ECO mode or switch off the HVAC system when the guest leaves the room can be defined, among the possibility to configure the maximum and minimum setpoints defined by the guest.

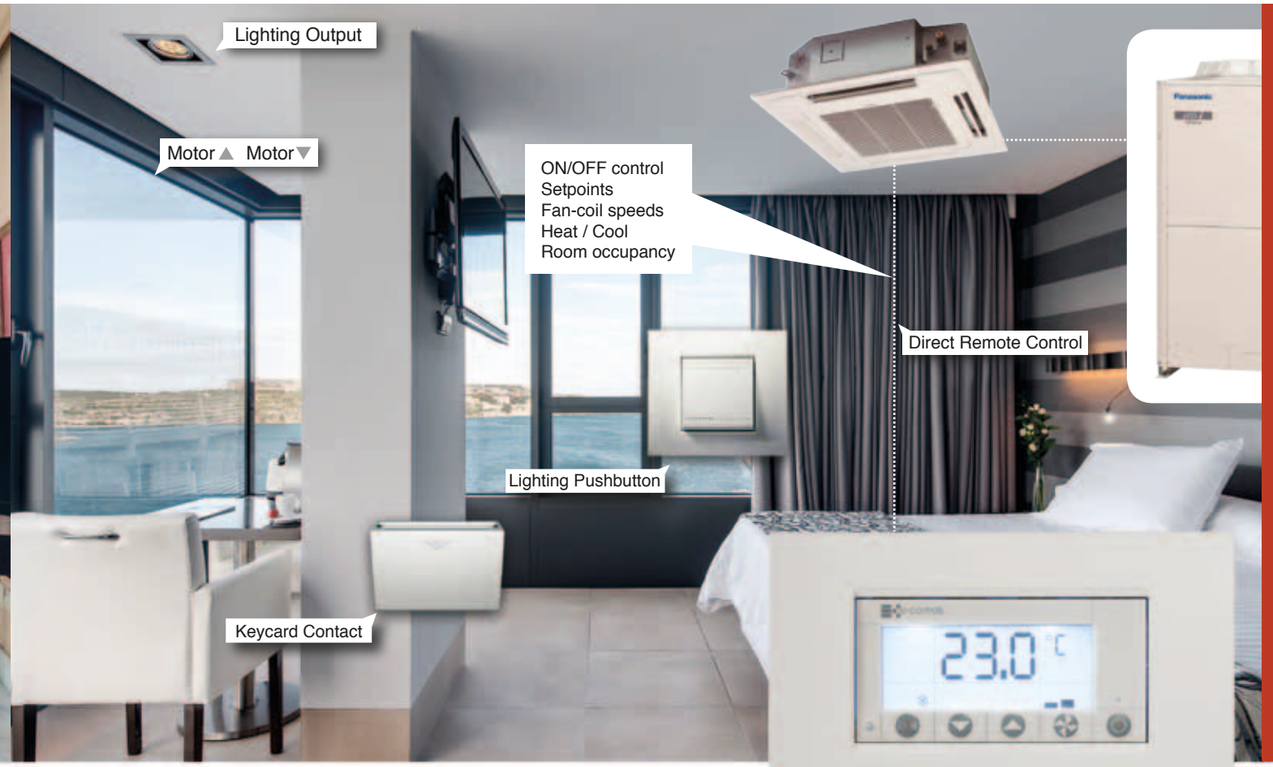
e-Room Stand-Alone is a fully configurable device for low cost applications which becomes a flexible and powerful product for any kind of installation like hotel rooms or offices.

- Stand-alone HVAC and lighting
- Occupancy based climate control
- 2 Pipes / 4 Pipes systems
- A single control device for each zone
- Auxiliary lighting input / output
- Up to 24 configurable parameters

Clima e-Room® Panasonic

Room climate control for VRF applications

1 Application direct expansion indoor unit and room control



RV.004401-000

Direct expansion system control and room management in a single device

The e-Room® Panasonic device is an innovative product to directly operate over the Panasonic VRF Indoor Unit system. The device includes a set of functions to operate over the HVAC system, the lighting system and the blinds using only a single device in a hotel room, providing also some functions to operate over a second heating/cooling zone like a bathroom.

The device is including up to four different pre-defined input/output configurations to operate over different hotel room specifications. A Keycard switch contact can be used to enable the HVAC system, among to automatically switch on the lighting system or the entrance courtesy light when the guest enters in the room. The device automatically switches the HVAC system off or changes into ECO mode when the guest leaves the room, switching also the lights off. A window contact can be used to temporary switch off the HVAC system when opening it, activating it again when it is closed. The device can operate over a motorized blinds, changing the position with some pushbuttons accordingly to the guest.

Using the e-Room® Panasonic bus system model, a standardized communication protocol solution can be used to operate over the room with a remote monitoring and control BMS system.

- Direct Panasonic indoor unit control
- Room control and VRF control in a single device
- Four configurations for different room applications
- User and real adjustable setpoints
- Occupancy and window contact energy saving functions
- Stand-alone or bus systems

Clima | e-Room®

Room Climate Control for Fan Coil applications

Open Systems integrable HVAC control

e-controls® electronic intelligent controls, s.l.

DATASHEET

RC.624501-000

Energy Efficiency in HVAC

e-Room® is a device designed to provide overall room climate control on fan coil based systems. The device operates over the HVAC system depending on the occupancy status of the room and the window status, managing the fan coil and valves according to the temperature and the setpoint defined. Its operation provides a user friendly control and allows remote facility management through an standard ISO/IEC 14908 (LonWorks®) or Modbus RTU (RS-485) communication bus depending on model. Originally designed for use in hotels, its versatility has made it present nevertheless in offices, small rural hotels and homes, amongst others.

e-Room® Classic is a solution comprising a single device that includes on its front panel a large display screen, pushbuttons and a temperature sensor, in addition to card reader contact and window contact inputs that provide energy efficiency optimization in installations. It further includes analog inputs for water temperature measurement (changeover function), and external temperature sensor measurement. The device also includes output relays for Heat/Cool valve actuator On/off control and three outputs to manage fan coil speed. All these features are included in a single device to support a simple, easy and fast installation and to optimize startup times and facility maintenance. In case of two pipes installation, the additional output can be used also for lighting control purposes. Thanks to its versatility, the device can be configured to control the occupancy status of the room using a keycard contact or a motion sensor and a door contact.

Two different models comprise the product reference: **e-Room® Classic** for **LonWorks®** installation based systems and **e-Room Modbus** for **Modbus RTU installations**.

- Energy consumption optimization
- Designed for 2 pipe and 4 pipe systems
- On/Off valve control
- Stand-alone operation
- Easy installation
- LonWorks® or Modbus RTU

Energy Efficiency

- Up to 20% energy savings
- Zone occupancy detection based on keycard switch contact or motion detector upon model
- Window contact stops operation
- Configurable Max/Min setpoints
- Dual ON/ECO setpoint
- ECO mode on unoccupied zone

Remote Management

- Remote manual or programmable On/Off control
- Adjustable setpoints
- Pushbutton locking feature

Integration

- ISO/IEC 14908-2 TP/FT-10 LonWorks® bus
- LonMark® compatible
- Modbus RTU (RS-485)

- Low cost model 2I/4O Modbus RTU

Patented product

Installation

- One single device per zone
- Reduced installation time
- Improved maintenance

Features

- Supply Voltage 24Vac/24Vdc
- Stand-alone operation
- Front panel ambient temperature sensor

Room Climate Control for Fan Coil applications

1 Application Hotel 2 Pipes / 4 Pipes keycard switch contact

RC.624501-000

Integrated control in a single device

On the **e-Room Classic** model, the device is enabled when the card is inserted, allowing the user to connect the HVAC system and change the setpoint as desired. In 2 Pipes systems it's possible to use the auxiliary output for a lighting point which will be switched on automatically when the card is inserted. The HVAC control is done in stand-alone mode, controlling the valve actuator and fan-speed outputs on demand. Opening the window stops the HVAC system temporarily, activating it again when it is closed. The auxiliary output is switched on temporarily when the card is removed (in 2 Pipes system configuration) and stops the HVAC system or changes it to low consumption mode depending on the configuration. Remote monitoring and control of the device can be done by means of its communication bus for BMS global control system integration.

On **e-Room Detector** model, occupancy detection in the room can be achieved by a combination of door contact and movement sensor installed in the room, enabling in this case the HVAC system for its use at any time. The combination of door closed and the absence of people automatically stops the HVAC system.

- 2 Pipes / 4 Pipes systems
- On/Off valve control
- Device locking card contact
- Window contact stops operation
- Additional Lighting output (2 pipes)
- Stand-alone operation

Clima e-Room® Modbus

Room Climate Control for Fan Coil applications

2 HVAC control with occupancy sensor

RC.674501-000

Energy saving occupancy detection based control

e-Room Modbus device has some embedded configurations available to manage different input and output arrangements for room automation in hotels and offices. In this application note the device has been configured to manage the HVAC control of the zone depending on the occupancy detection provided by means of a motion sensor. The device is installed on the zone and wired with a sensor which carries out the occupancy detection signal. The purpose of the application note is to automatically switch on and off the climate control, or change it into economy mode when the room turns to occupied and unoccupied.

In order to control the occupancy of the room, one or more motion sensors can be installed on the zone and wired to a digital input of the device. Some door contacts are also installed to automatically switch the system off when the door is opened and all the people has left the zone. With this concept, anytime the door opens, the system reads the motion sensors in order to switch off the HVAC system if the sensors does not monitor any activity in the room.

The RS-485 channel and the Modbus protocol provides the possibility to monitor and control the room from remote at any time. Any activity detected by the motion sensors are translated into the e-Room® and can be monitored through the network, but also the temperature and some other functions.

- HVAC control interface
- Easy and intuitive visualization
- Local control pushbuttons
- Front panel integrated temperature sensor
- Easy installation
- Remote control through Modbus RTU (RS-485)

Overall Zone Energy Efficiency

e-Room® Plus is a device that provides room climate and lighting energy management control. It is designed to optimize energy savings in room or zone climate and lighting services. The unit includes various operating profiles to cover every possible requirement for offices, hotels, hospitals and old people's homes.

e-Room® Plus is designed to be integrated into a network to perform remote control through the standard ISO/IEC 14908 (LonWorks®) communication bus using the TP/FT-10 twisted pair cable or through mains using the PowerLine media for retrofit installations. The device includes key card reader contact and window contact inputs for climate energy savings, in addition to a digital input and a relay output to control a lighting system. It further includes analog inputs for water temperature measurement, and external temperature sensor. Two relay outputs are used for Heat and Cool valve actuator On/Off control and three more ones for the fan coil speed.

The TP/FT-10 version model includes several pre-programmed applications for hotel, office and hospital room automation. The PowerLine model is the ideal solution for retrofit applications where bus cable installation difficult. The robust and reliable communication through mains is possible using the LonWorks communication and can be integrated in any LonMark® system. Two different models are available, one of each with integrated PIR sensor for motion detection.

- Climate and lighting energy efficiency
- Hotel/Office/Hospital operating modes
- On/Off valve control
- Key card contact or detector based occupancy monitoring
- LonWorks® TP/FT-10 or PowerLine

Energy Efficiency

- Up to 25% energy savings
- Climate + lighting control in a single device
- Occupancy monitoring based on key card contact or presence detector
- Window contact stops operation
- Configurable Max/Min setpoints
- ECO mode for climate and lighting control

Remote Management

- Remote or programmable On/Off control
- Adjustable setpoints
- Pushbutton locking feature

Integration

- ISO/IEC 14908-2 TP/FT-10 network
- ISO/IEC 14908-3 PowerLine network
- LonMark® compatible

Installation

- Single device
- Reduced installation time
- Improved maintenance

Sunblinds automation management and HVAC control

1 Application Office with Sunblinds

RP.626601-000

Clima and sunblinds/curtains automation from a single unit

In this application note the e-Room Plus device is configured in Office Sunblinds mode and provides a 2 pipes system HVAC control and an automated curtains / sunblinds management. The HVAC system is directly controlled through the device pushbuttons, or it can also be remotely controlled through its standard communication bus. The HVAC system is done in stand-alone mode on the device, managing its outputs automatically for the valve actuator control and the fan-coil speed on demand. Opening the window stops the HVAC system temporarily, activating it again when it is closed. The raise and lower curtain pushbuttons are directly connected to the device, like the two relays output that control both motor directions. The device includes timeout raise/lower limit switch configuration variables that can be changed through the bus depending on each installation.

Any HVAC control function and curtain/sunblinds automated position control function are available through the communication bus for a global Building Management System remote control.

- 2 Pipes installation
- On/Off valve control
- Pushbuttons and relay outputs for curtains automation
- Window contact stops operation
- Stand-alone operation
- Remote control with LonWorks® network

Clima e-Room® Plus

Occupancy dependent HVAC and lighting control

2 Application Office 2 Pipes / 4 Pipes

RP.626601-000

HVAC and Lighting from a single unit

In office installations the zone HVAC and lighting systems is controlled by the device depending on the occupancy status. When the motion detector is detecting occupancy, the device turns to enable mode, allowing the user to connect the HVAC system and change the setpoint as desired. When the zone is occupied the lighging output turns to on and turns it again off after some time from the last movement detection.

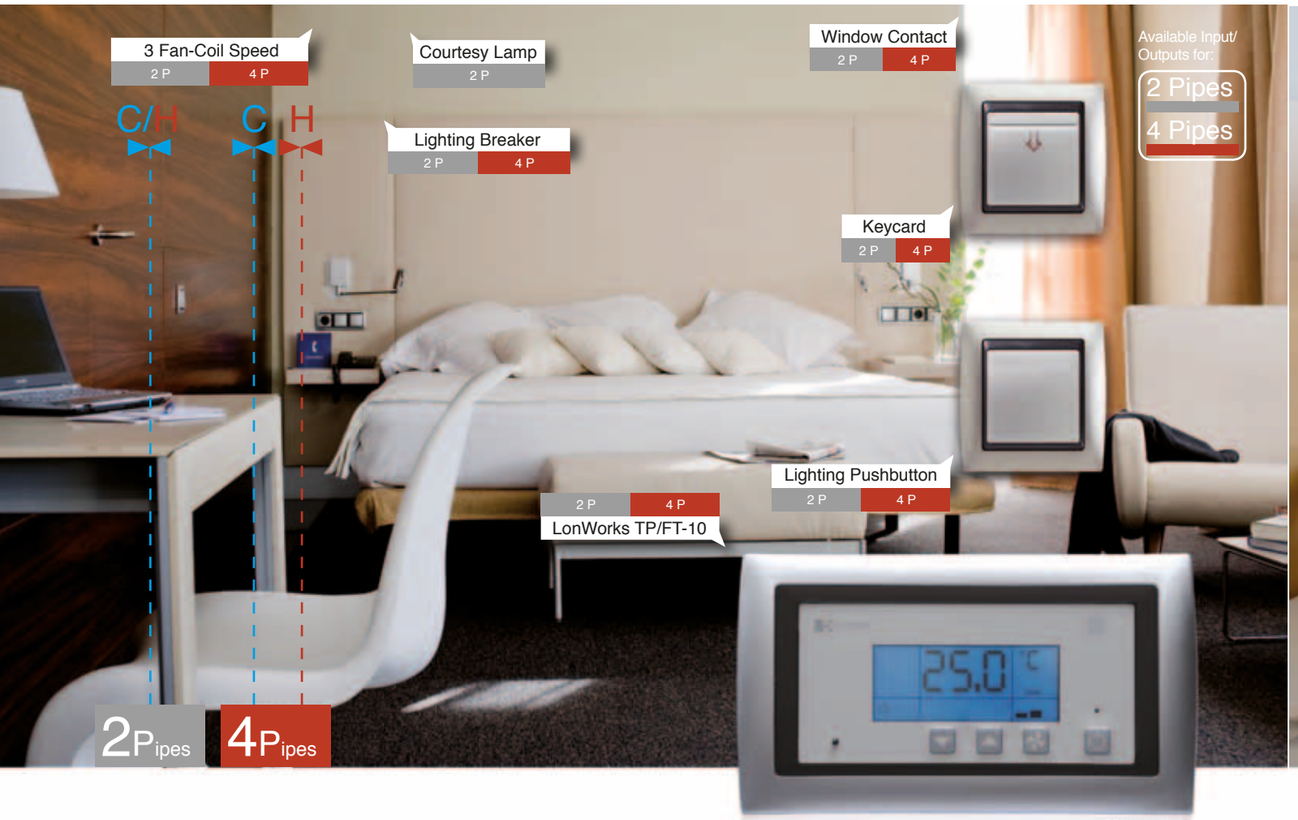
The user can also manually turn on permanently the light using a wall switch actuator. When the zone changes to unoccupied, the HVAC system turns to off or to low consumption mode, depending on the configuration previously downloaded. Opening the window stops the HVAC system temporarily, activating it again when it is closed. The device can be configured for 2 pipes or 4 pipes system. In 2 pipes system the Occupied Zone Indicator output shows the zone occupancy status. The HVAC system is directly controlled through the device pushbuttons, or it can also be remotely controlled through its standard communication bus and do automatic switch on/off programming functions, change operation mode or setpoint through an external real time clock event. The device includes remote control mechanism that enables the keypad blocking to avoid the user manipulate the operating through it.

- 2 Pipes / 4 Pipes systems
- Motion detector HVAC and lighting control
- Window contact stops operation
- Pushbutton and lighting control output
- Occupied zone indicator
- Remote control through LonWorks® network

Clima e-Room® Plus

Card contact HVAC and lighting control

3 Application Hotel 2 Pipes / 4 Pipes keycard Contact



RP.626601-000

Keycard contact occupancy control

In keycard contact Hotel 2 Pipes / 4 Pipes operating mode, the HVAC and lighting systems are controlled by the device depending on the occupancy status. When the card is inserted, the device turns to enable mode, allowing the user to connect the HVAC system, activating the circuit breaker lighting output and switching on the lights automatically. A manual pushbutton for bedroom lighting control is provided to the user. The HVAC system is done in stand-alone mode on the device, managing its outputs automatically for the valve actuator control and the fan-coil speed. Opening the window stops the HVAC system temporarily, activating it again when it is closed.

When the card is removed the HVAC systems turns to off or changes to low consumption mode depending on the configuration, and the lighting is switched off. In 2 pipes systems the device includes an extra output for the courtesy lighting room control, switching it on when the card is inserted and switching it automatically off after a configurable expiration timeout. When the card is removed the same operation is done by the device.

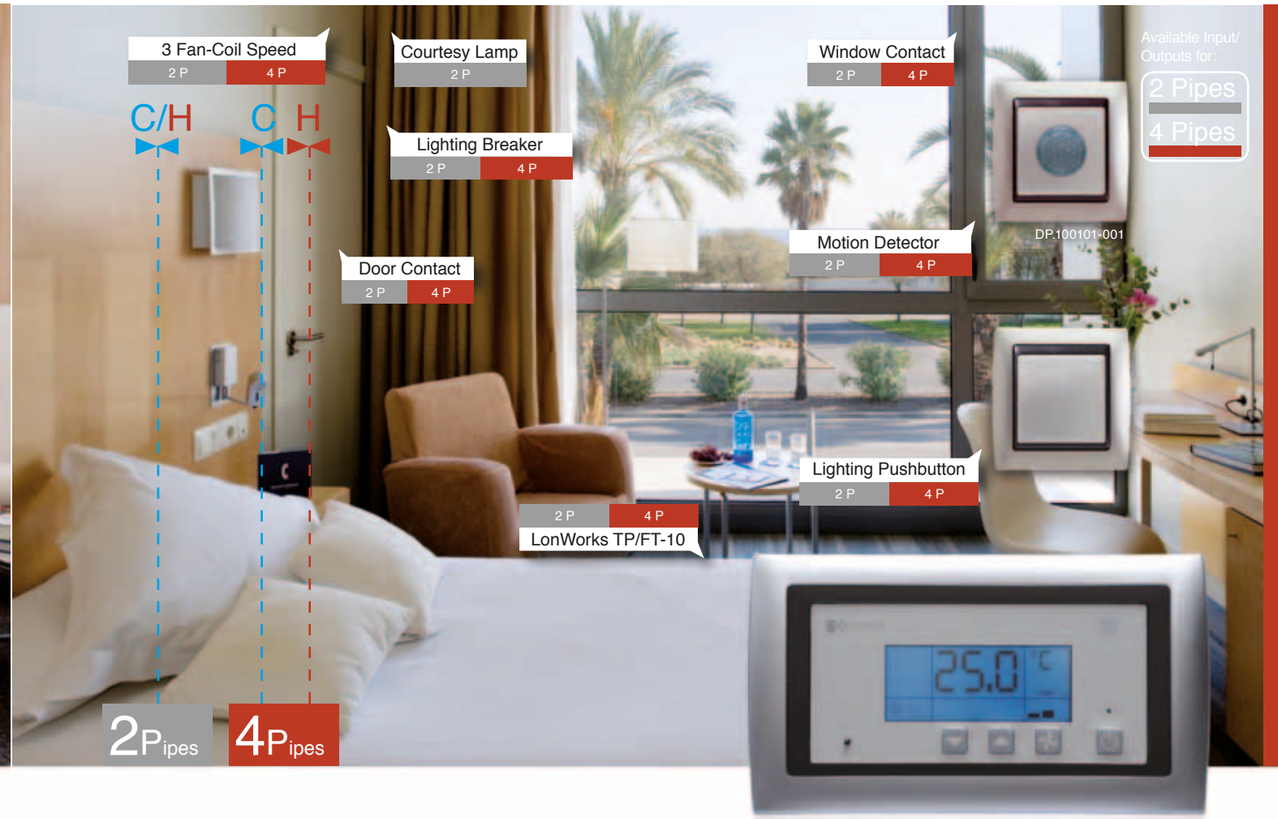
All the HVAC and lighting control functions are available through compatible LonMark® functional blocks that are accessible from the global Building Management remote control System.

- 2 Pipes / 4 Pipes systems
- On / Off valve control
- Device blocking card contact
- Window contact stops operation
- Lighting control output and pushbutton
- Remote control through LonWorks® network

Clima e-Room® Plus

Motion detector HVAC and lighting control

4 Application Hotel 2 Pipes / 4 Pipes Motion Detector



RP.626601-000

Motion detector occupancy control

In Hotel 2 Pipes / 4 Pipes Detector operating mode, the HVAC and lighting control is controlled by means of the occupancy defined between the combination of a door contact and a motion detector. When the door is opened and movement is detected in the room, the device turns to enable mode, allowing the user to connect the HVAC system, activating the lighting output and switching on the lights automatically. A manual pushbutton for bedroom lighting control is provided to the user. The HVAC system is done in stand-alone mode on the device, managing its outputs automatically for the valve actuator control and the fan-coil speed on demand. Opening the window stops the HVAC system temporarily, activating it again when it is closed.

The combination of a door closing and an absence of motion detection stops the HVAC system or changes it to low consumption mode and switches the output lighting to off. In 2 pipes systems the device provides an additional output for room courtesy lighting control, activating it when the door is opened and turns to off automatically after a preconfigured timeout.

All the HVAC and lighting control functions are available through compatible LonMark® functional blocks that are accessible from the global Building Management remote control System.

- 2 Pipes / 4 Pipes systems
- On / Off valve control
- Occupancy control by motion detector and door contact
- Window contact stops operation
- Lighting control output and pushbutton
- Remote control through LonWorks® network

Clima e-Room® Plus

Room alarm management and HVAC control

5 Application Hospitals

HVAC and alarm management from a single unit

In hospital operating mode, HVAC control and room alarm management are provided by the device, as well as alarm lighting indicators to show if the the room is in alarm status. The HVAC system is directly controlled through the device pushbuttons, or it can also be remotely controlled through its standard communication bus. The HVAC system is done in stand-alone mode on the device, managing its outputs automatically for the valve actuator control and the fan-coil speed on demand. Opening the window stops the HVAC system temporarily, activating it again when it is closed.

The device is provided with inputs for occupied bed sensor, doctor call and panic alarm, as well as a digital input to reset the panic alarm through a safety key from the room. The alarms are shown through a room alarm indicator output and doctor call indicator. The alarms are sent using the standard communication bus to show the status by a Building Management System and displays on the reception of each floor. All the HVAC parameters can be remotely controlled through the communication bus.

- 4 Pipes system
- On / Off valve control
- Window contact stops operation
- Control center alarm information
- Room identification alarm indicator
- Remote control through LonWorks® network

Clima e-Room® Plus

Open systems VRV integration

6 Application Integration with VRV

HVAC and Lighting integration with VRV System

The VRV system integration application mode allows to use the HVAC and lighting device functions for HVAC control depending on zone occupancy status.

The e-Room Plus device manages the on/off functions, temperature setpoint, fan-coil speed and heat/cool mode VRV indoor unit through the standard communication bus up to the VRV system gateway. In addition it is also used to show the room temperature provided by the indoor unit, fan-coil speed and actual operating mode.

The motion detector turns the device to enable mode when movement is detected, and the lighting circuit breaker is also activated. A manual pushbutton for bedroom lighting control is provided to the user. Opening the window stops the HVAC system temporarily sending a message through the bus to stop the indoor unit, activating it again when it is closed.

All the HVAC and lighting control functions are available through compatible LonMark® functional blocks that are accessible from the global Building Management remote control System.

- VRV clima control
- e-Room® Plus zone control
- Keycard contact or detector based occupancy monitoring
- Window contact stops operation
- Lighting control output and pushbutton
- LonMark-IP and BACnet BMS integration

Clima | e-Room® Plus Stand-Alone

Stand-Alone HVAC room controller for rooms

Stand-Alone controller expandable to remote communication

DATASHEET

e-controls® electronic intelligent controls, s.l.

RP.504501-010

Energy efficiency in HVAC with automatic occupancy detection

e-Room Plus Stand-Alone is an stand-alone climate controller for water pipes installations with fan coil, designed to fully optimize the energy consumption of installations because of its ability to switch the climate off or change to economy mode, when the room or zone becomes unoccupied.

The device is directly supplied from mains and has different inputs and outputs for carrying out the climate control depending on the zone occupancy and the window state. Occupancy zone detection is carried out through a key card contact or a motion sensor built in the front panel which, along with a room door contact, detect the guest entrance and activates, stops or changes the climate to economy mode automatically or disconnects it depending on the configuration. On 2 pipes installations it is possible to use the auxiliary output for lighting controls purposes, automatically operating the courtesy lighting or general lighting when someone enters or leaves the room.

Throughout a simple setting menu it is possible to modify multiple configuration parameters to adapt the product to the need of any installation. In the different product references, there is one autonomous version expandable to BMS systems communication through electrical mains.

Energy saving for unoccupied room

Integrated motion sensor

Stand-alone operation

Mains electrical supply

Expandable to BMS communication

Energy Savings

- Climate control for occupancy detection
- Occupancy detection based on key card or integrated sensor
- Window contact stops operating
- Changes to OFF/ECO mode if unoccupied room

Clima | e-Room® Controller

Climate room controller for fan coil rooms

Remote controller with optional Modbus protocol

e-controls® electronic intelligent controls, s.l.

DATASHEET

RN.573501-000

Multi-configurable fan-coil controller for any installation

e-Room Controller is an stand-alone fan coil controller for hotel rooms, offices and zones, designed to satisfy the most demanding requirements in climate control and energy saving, thanks to its configuration possibilities and integrated functions on the device. It can operate in two or four pipes water installations and provides occupancy zone detection throughout a key card contact or a motion sensor, which allows switching off the climate when zone changes to unoccupied state. The device includes a function to stop the climate when the window is opened, avoiding unnecessary energy consumption.

The product is installed with the **e-Display** or **e-Display Plus** devices which has a keyboard, temperature sensor, and visualization display, and provides it the supply and a bus connection for the communication. It has configurable digital inputs for key card contact/motion sensor, window contact and an analogue input to connect to an external temperature sensor or for door open detection purposes. The controller includes three relay outputs to control the fan coil speed and one or two outputs for cool valve actuator and heating/lighting depending on the device model. The device is directly supplied from mains and is designed to be installed in a DIN rail enclosure.

The product is available to operate in stand-alone mode or with Modbus RTU communication bus to monitor and remote control of the installation, including the necessary registers to configure and manage throughout an SCADA application.

Energy saving for unoccupied room

Clima

e-Display, e-Display Plus

Display for fan-coil control

Temperature, humidity, CO2 and motion sensor in a single device

DATASHEET

RD.970000-000

Display with multiple sensors for room climate control

e-Display and **e-Display Plus** are a family of visualization displays used for climate and fan-coil control in hotel rooms and offices. A wide variety of models with different sensors can be used by the system integrator in any installation to get the maximum energy saving as possible. The products are available with different frames to select the one that best fits any room space.

For room climate control the device is including a temperature sensor in the front panel and optionally an humidity sensor to control at any time the room temperature. In order to achieve a correct air renovation, the product is available with a CO2 sensor used to control the position of the air flow dampers. If an occupancy control is requested for the room, one model is available with a motion sensor in the front panel, that provides the possibility to detect the room unoccupied and change the climate to low power consumption and switch off the lights.

Two product models are available depending on the application: the **e-Display** to communicate directly with the **e-Room Controller**, and the **e-Display Modbus** to communicate with any Modbus device of the market. The products communicate with any fan-coil controller or room controller using an standard RS-485 interface

Display for fan-coil controller

Temperature, humidity, CO2 and motion sensor

Remote monitoring of climate control and sensors

Modbus protocol over RS-485

Different frames and colors available

Remote control

- Climate ON/OFF control
- Ambient temperature and setpoint to show on display
- Different icons available to modify over the network: Window, alarm, heat/cool/auto mode, Fan-coil speed, CONF/ECO/ANTI mode, %HR, ppm

Monitoring with BMS

- Room temperature sensor for climate control
- Room humidity sensor for climate control
- CO2 sensor for air flow renewal
- Motion sensor for occupancy control
- Setpoint temperature, heat/cool mode, fan-coil speed

Device configuration

- Modbus address, speed and parity
- Celsius/Fahrenheit measuring units
- Fan-coil speeds
- Default setpoint
- Maximum/minimum user setpoint limits
- Setpoint/temperature to show on the display
- Different pushbutton lock options

Features

e-Display and **e-Display Plus**
- Supply Voltage: 12Vdc
- Interface: RS-485
- Protocol: e-Room Controller
- Network terminator included

e-Display Modbus and **e-Display Plus Modbus**
- Supply Voltage: 24Vdc
- Interface: RS-485
- Protocol: Modbus RTU

All models
- Ambient temp. sensor: +5 to +45ºC
- Humidity sensor (optional): 10 to 95% RH
- CO2 sensor (optional): 0 to 2000 ppm
- Motion sensor (optional):
  - Maximum detection distance 8 m
  - Detection angle: 98º
  - Detection diameter 18 m (at 7 m)
  - Digitally adjustable sensitivity
- Flush mounting
- Surface mounting enclosure available
- Different frames and colors available

Temperature, humidity and pressure display

Display parameters sequential reading

DATASHEET

e-controls®
electronic intelligent controls, s.l.

Applications:

1 Operating Room

2 White Room

DC.621001-000

Weather parameters under control

e-Clima is a device that provides temperature, relative humidity and pressure values supplied by different sensors located in a room. It includes an EN 14908 LonWorks® communication bus through which values supplied by the various remote sensors are received; these are in turn displayed on the screen for simple and intuitive reading. An analogue input is provided for direct connection of an NTC temperature sensor where a temperature sensor is not to be connected to the bus.

e-Clima allows the sequential display of sensor supplied temperature, humidity and pressure values. Two versions are available, one without local setpoint control and another with local control that allows temperature and relative humidity setpoint adjustment through a 4 button keypad, to have the values sent through the Lon network to a remote climate control device.

This unit is particularly suited for applications such as hospital operating rooms, clean rooms, laboratories, refrigeration chambers, cinemas, maintenance departments, etc.

Intuitive display

Easy and fast reading

Temperature, Humidity and Pressure

External sensors

Keypad for setpoint adjustment

LonWorks® network

Display

- Temperature, Humidity and Pressure
- Sequential reading
- Adjustable display times
- Configurable display backlighting
- Configurable auto power on

Remote Management

- Remote On/Off
- Keypad adjustable setpoints
- LonWorks® network based parameter transmission

Integration

- ISO/IEC 14908 LonWorks® bus
- LonMark® compatible

Installation

- Single display unit
- Optional external temperature sensor

Features

- Supply Voltage 24Vac/24Vdc
- TP/FT-10 twisted pair
- ISO/IEC 14908 LonWorks network
- BTicino Light frame (different colors available)
- Independent external sensors
- External temperature sensor (optional)
- Temperature range: –199.9 to +199.9 (°C/°F) @ 0.1 °C/1 °C
- Humidity range: 0% to 99% @ 1%

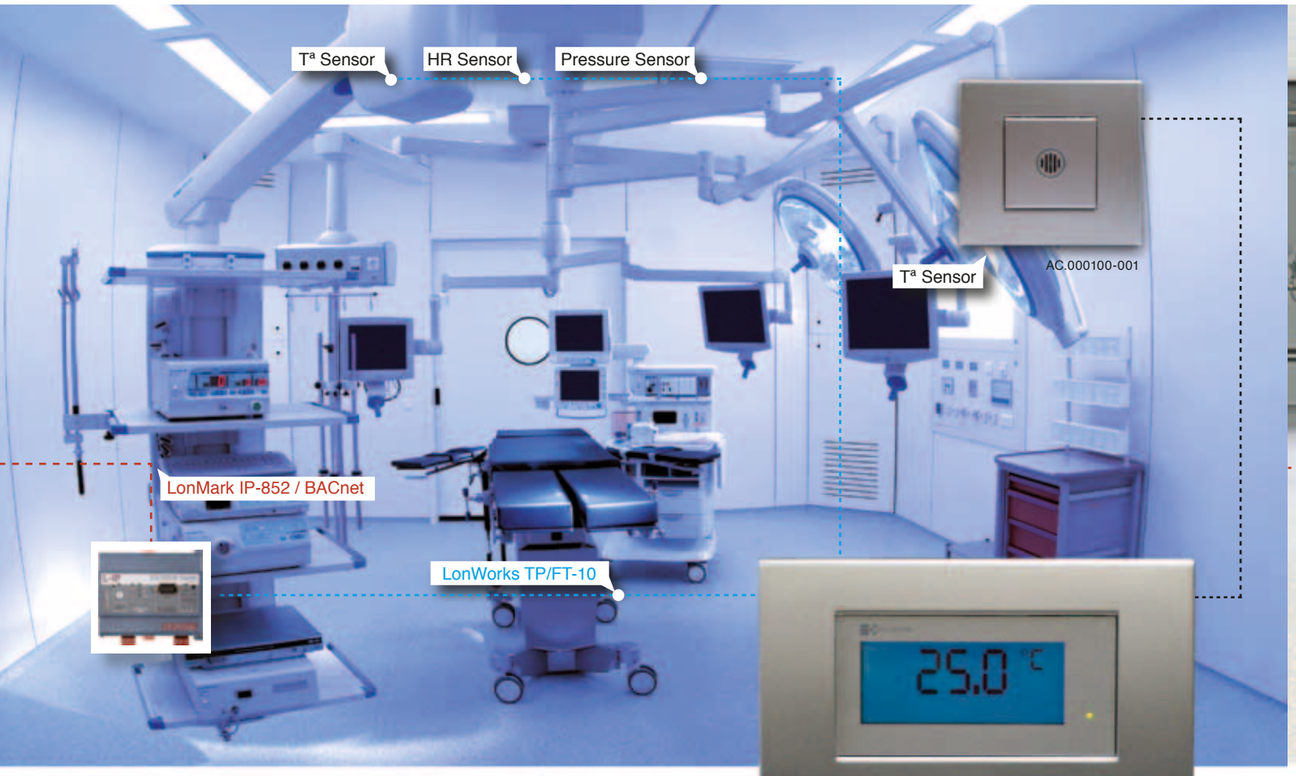
Temperature, humidity and pressure visualization

1 Application Operating Room



DC.621000-000

Meteorological parameters under control

Ambient temperature, humidity and pressure in operating rooms must be displayed in a physical visualization system as defined in the actual standards for hospital installations. With e-Clima it is possible to show this information on the screen using different sensors that provide the ambient parameters through the standard communication bus to the display. Ambient temperature can also be measured using an NTC10K sensor with an analog input also available on the device. In this case the device must be configured to show the value of this input instead of the value received from the bus.

Network variables with bindings to the external sensors are automatically detected by the device and showing the values sequentially on the screen when more than one parameter should be displayed. The visualization time can be configured through a network variable.

Some output network variables are also available to send the values to other devices on the network.

- Intuitive display
- Easy and fast reading
- Temperature, Humidity and Pressure
- External sensors
- Optional external temperature sensor
- LonMark-IP and BACnet BMS integration

Visualization | e-Clima Setpoints

Temperature, humidity and pressure visualization

2 Application White Room

DC.621001-000

Display visualization with setpoint pushbuttons

The **e-Clima Setpoints** device includes four buttons keypad on its front panel for temperature and relative humidity setpoint adjustment. Last fixed setpoint is shown when pressing a key and subsequent pressings modify the value accordingly. Some output network variables are also available to send the values to the zone HVAC control system.

The same as e-Clima, ambient temperature, relative humidity and pressure are shown on the display from different sensors of the installation transmitting information through the standard communication bus to the device. Ambient temperature can also be measured using an NTC10K sensor with an analog input also available on the device. In this case the device must be configured to show the value of this input instead of the value received from the bus.

- Kaypad for Tª and RH setpoint adjustment
- Sequential parameters display
- Optional backlit switched on
- LonMark-IP and BACnet BMS integration

Curtains and lighting scenes control

e-Scene® is an innovative pushbutton pad for lighting control of areas such as offices, meeting rooms, auditoriums, etc. This unit can control up to five lighting areas independently with on, off and dimming functions for each area, optimizing power consumption levels in real time. It includes five memory locations to configure and apply different lighting scenarios; it can also control blind or curtain motors to meet user requirements at all times. This unit is designed to be installed in conjunction with any e-Controller series product.

System installation does not require additional wiring, dramatically reducing installation time and cost and providing an optimal solution for building refurbishment or rehabilitation. No computer or special software is necessary to configure the unit, rendering this solution even more versatile and easy to install.

Based on the ISO/IEC (LonWorks®) communication standard, this device may be integrated into any LonMark® system in the market.

Five independent lighting zones

Five programmable scenarios

No additional wiring required for installation

No computer required for commissioning

Robust and reliable technology

LonWorks® network

Energy Savings

- Light dimming for each zone
- Five memory locations for scenario application
- Integration of blinds and curtains

Integration

- ISO/IEC 14908 LonWorks® bus
- LonMark® compatible

Installation

- No additional wiring required
- 4 step commissioning; no computer required
- Installation with 1-10 V electronic ballasts
- Ideal solution for refurbishment and rehabilitation

Features

- Five channels for lighting and blind control
- Five memories for lighting scenarios
- User programmable memories
- Blue LED backlit touch keys
- Infrared receiver for remote operation
- Supply Voltage 95-250Vac 50/60Hz
- PowerLine mains data transmission
- ISO/IEC 14908 LonWorks® network
- BTicino Light frame
- May integrate in LonMark® open systems

Energy saving of lighting spaces

The e-Controller 1-10V is a device used for light dimming at an optimum level every hour of the day on different spaces in a building. Designed to maximize sites energy consumption and save energy without reducing the comfort level, the device can also be used with multisensors for automatic light dimming like the e-Multisensor Bus PowerLine or the e-Scene pushbuttons used for light manual dimming and scene lighting control, to adapt any space to the user needs.

The mains electrical network is used by the device for data transmission with other devices.
A data transmission system is included on the device which takes the advantage of the mains wiring as a means to transmit data with other devices, without the need to plan ahead for new wiring on the installation, making it particularly suitable for facility refurbishment. Along with its easiest installation, an auto-installation mechanism is included on the device to avoid commissioning with a laptop.

Other e-Controller products are available with the following functions:
e-Controller 1 Relay Output, including one high power relay output (10Amp) for switching up to 2000W loads.
e-Controller 2 Input / 2 Output ON/OFF, including two inputs for local or remote outputs switching and two 5Amp small loads relay outputs with local or remote switching.

Lighting energy saving

Integration with multisensors

Energy Saving

- Light level control as needed
- Individual integration with multisensors
- Switching on/off and light dimming
- Efficient dimming with 1-10V analog output

Remote Control

- Mains data transmission
- Dimming from multisensors, keypads and controllers

Integration

- LonWorks® ISO/IEC 14908 bus
- LonMark® compatible

Installation

- No new wires needed
- Multiple luminaries control with a single device

Features

- Supply Voltage 95-250Vac 50/60Hz
- Two phase contact digital inputs (2In/2Out model)
- One phase contact 15Amp relay output (1-10V and 1 Relay models)
- Two phase contact 5Amp relay outputs (2In/2Out model)
- 1-10V active analog output for ballast dimming and LED driver (1-10V model)
- 10 programmable memory scenes
- Inputs status LED indicators (2In/2Out model)
- Outputs test pushbuttons and outputs status LED indicators
- e-Scene keypad and e-Multisensor auto-commissioning
- Mains data transmission (PowerLine)
- ISO/IEC 14908 LonWorks network
- External BTicino Light frame
- Integrable with LonMark® Open Systems

Comfort and energy saving with different ambient definition

The **e-Controller 2 Inputs / 2 Outputs Sunblinds** is a device used for easy and comfortable raise/lower control automation functions on sunblinds or curtains. Two digital inputs for conventional pushbuttons are included on the device for direct control of two relay outputs for motor position management.

The main advantage of the device is the ability of being remotely controlled through keypads like e-Scene or other e-Controller devices, for position motor control functions at any percentage level and the possibility to manage up to ten scenes. For this purpose the system takes the advantage of using the existing mains electrical wiring for data transmission between devices and no additional wirings are required for the installation, making it particularly suitable for facility refurbishment of existing buildings where new wires are difficult to install.

Some pushbuttons and LED indicators are disposed on the front panel of the device for outputs testing and inputs state monitoring, and an auto-installation system is included for automatic installation with the s-Scene keypad to avoid commissioning with a computer.

- Integration with keypads
- Opening percentage control
- Ten memories for scene control
- No computer need for set-up
- Remote control with no new wires
- LonWorks® network

Lighting control in meeting rooms

1 Auditorium lighting control

BT.51G000-000

Auditorium lighting control application

The e-Scene keypad is used for 4 zone lighting control and a projection screen control in a room like this auditorium, switching on, off and dimming or positioning each individual zone of the facility according to the needs at any given time. The combination between lighting and motors for curtains, blinds or screens control is providing a global control on the installation and its application on any environment. Five scene keys S1 to S5 are used to save different light levels or motor position of every one of each channel at the same time, for further recall with a simple scene key touch. The solution is comprising by the **e-Scene** keypad and different **e-Controller 1-10V** light dimming receivers or an **e-Controller 2In2Out Sunblinds** motor control receiver. One channel can control more than one e-Controller at the same time, thus making all of them the same function.

The system takes the advantage of using the existing mains electrical wiring for data transmission between devices and no additional wirings are required for the installation, making it particularly suitable for facility refurbishment of existing buildings where new wires are difficult to install.

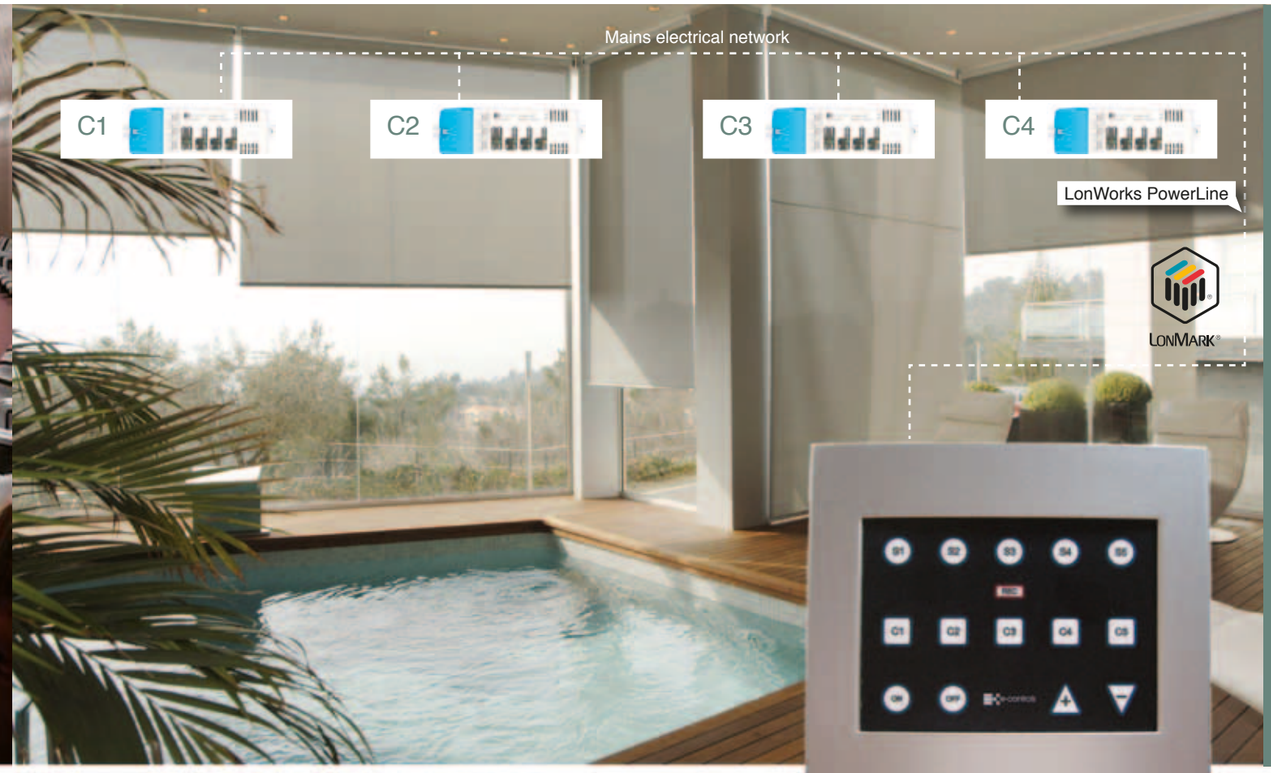
- Five independent lighting zones
- Five programmable scenarios
- No additional wiring required for installation
- No computer required for commissioning
- Robust and reliable technology
- LonWorks® network

Sunblinds

e-Controller 2In2Out Sunblinds

e-Scene curtains and blinds automation

2 Spa sunblinds control



BT.51G000-000

Total comfort with integrated curtains and lighting

The curtains, blinds and screens automation **e-Controller 2In2Out Sunblinds** receiver, takes care of the position control on each of the curtains on the facility. Every receiver can be configured on one channel of the e-Scene keypad for remote control, but also many receivers can be configured on a same channel when the user wants to do the same control on all of them at the same time.

Two digital inputs for conventional pushbuttons installation are included on the device so that the user could do a direct control from the wall pushbuttons. Every device can be remotely controlled using its communication bus using the mains electrical network to communicate with the e-Scene keypad or any other device on the network.

The Scene position control allows you to have different preconfigured blinds positions and do an automatic adjustment with an easy desired scene key press. A control system is included on the device to do an specific position control on values between 0 to 100%.

- Individual motor position control
- Scenes for global channel position
- No additional wiring required for installation
- All signals are sent through the mains network
- Designed for existing installations

Lighting energy saving in offices

e-Multisensor Auto is a powerful digitally controlled multisensor range of products, designed to provide an stand-alone lighting control solution in buildings, in order to obtain an energy saving at the lowest installation and equipment cost. Including a motion sensor and a light sensor, both components combined provide multiple control applications in any building area. Three different models are available:

e-Multisensor AutoDim DALI and **e-Multisensor AutoDim 1-10V** are two innovative multisensors for automatic light dimming level on occupied zones. The ambient light level is measured by the light sensor to keep the luminaries at a constant value throughout the day according to a pre-defined light setpoint. This allows reducing the energy consumption of the installation at a minimum level. An auxiliary external input can be used for scene control (switch mode) or dimming control (pushbutton mode). The light level can be adjusted using the DALI protocol or the 1-10V output value depending on the device.

e-Multisensor AutoOnOff is a device for automatic lighting switching on control when movement is detected and the ambient light level is below a minimum pre-defined value. If the light level is over the pre-defined value, the device will keep the lights off even a movement is detected. An automatic light switching off is done in two ways: when the amount of natural light in the zone becomes over the pre-defined value even the zone is occupied or by timeout since the last detection. An auxiliary external input can be used for keeping the lights on (switch mode) or to temporarily trigger the lights on (pushbutton mode).

Energy Saving

- Constant Light Controller (AutoDim model)
- Light level setpoint setting
- Motion detector to switch off unoccupied areas
- Timeout setting for switching off occupancy relay
- External input for switch and trigger in AutoOnOff model or Scene and Manual dim in AutoDim model.
- Up to 75% energy saving

Models

- ON/OFF: May fix the light level from which the output relay is switched on when the area is occupied.
- AUTODIM: May regulate the light level of occupied zones to a pre-defined setpoint value.

Installation

- Direct connection from sensor to luminaire (see diagram)
- Flush mounting in suspended ceiling
- Adjustable timeout for output relay automatic switching off
- Minimum light level setting adjustment for automatic light switching on
- Lighting setpoint adjustable for automatic light dimming control

CE

Features

- Supply Voltage 95-250Vac 50/60Hz
- Relay output 10A/250V for motion sensor (models 1-10V and OnOff)
- Timeout switching off: 5 s to 30 min, ON position to keep light switched on
- Detection area 6x6 m (installed at 3 m high)
- Max detection distance 8 meters
- 88 motion sensor detection zones
- Motion sensor coverage area 360º
- Isolated analog 1-10V output (AutoDim)
- Lux range 0 to 1000 lux (AutoDim), 0 to 2000 lux (AutoOnOff)
- Light sensor measurement angle +/- 50º
- Light setpoint setting for automatic dimming
- Light sensor with visible color correction radiation filter
- Flush mounting in suspended ceiling
- Dimensions 80x50 (ØxH, mm)

DP.801110-000

Motion detection for room occupancy control

e-Sensor Noiseless and **e-Detector Noiseless** are two devices designed to detect persons in motion and used to switch off the climate and lighting systems to save energy when zones become unoccupied. The products are intended to be installed in zones like hotel rooms and offices, where it wants to avoid any mechanical noise of other conventional sensors, providing a high level of comfort for the guest.

Through an output signal of transistor type, the device offers a noiseless contact that closes the circuit any time the device detects motion, generating a short pulse to the control system that manages the climate and lighting of the zone. A potentiometer to adjust the motion sensitivity to any environment is included on the devices and allows installing the device in any place.

e-Sensor Noiseless is a flush wall mounting motion sensor with different finishing colors and **e-Detector Noiseless** is a ceiling mounting device for flush or surface mounting. Both models are available for operating voltages of 12-24Vac/Vdc and for mains electrical network at 95-250Vac.

- Noiseless output transistor type
- High detection sensitivity
- Detection area 36m^2
- Adjustable detection sensitivity
- Wall or ceiling mounting

Energy saving in buildings

e-Multisensor 0-10V is an innovative multisensor including a motion detector and a light sensor for occupancy control and light level monitoring in a zone of a building. The data is sent to a control system for further processing of the light and HVAC management, in order to ensure an optimum energy saving of the facility. The light level is measured by the device and provided to the control system for later processing. The motion sensor can be used for automatic light and HVAC on-off switching depending on the zone occupancy state, switching it off and saving energy when the zone is in unoccupied mode.

The device is designed for flush mounting on a suspended ceiling providing a wide coverage area of 36m2, making it an ideal solution for loft offices, with a high sensibility level to detect the smaller movements and optimizing its operating. Finished with an ultra slim case design and an innovative aesthetic design, the product is the perfect solution for engineers, architects and indoor designers that are looking an innovative and elegant design product.

A relay output for the motion detector signal with adjustable 1 second to 50 minutes timeout for automatic off switching is included on the device. The light sensor signal is provided by means of a 0-10V analog output.

Energy Saving

- Light sensor for light dimming
- Motion detector for occupancy management
- Adjustable relay output timeout 1 second to 50 minutes
- Automatic switching off lights when zone unoccupied
- Occupancy control HVAC management
- May integrate in any control system

Features

- Supply Voltage:
  - DALI Bus: DALI supply (16Vdc)
  - DALI consumption: 3,5mA
- DALI channel
- Detection area 7x7mts (installed at 3 m high)
- Max detection distance 8 meters
- 88 motion sensor detection zones
- Motion sensor coverage area 360º
- Lux range 0 to 1000 lux
- Light sensor measurement angle +/- 50º
- Light sensor with visible color correction radiation filter
- Flush mounting in suspended ceiling
- Dimensions 80x50 (ØxH, mm)

Installation height	Detection diameter	Detection width corridors
2,0	5,0	3,6
2,5	6,0	3,8
3,0	7,0	3,9
3,5	9,0	4,0
4,0	10,0	5,5
5,0	11,5	6,5

Lighting controls in buildings

e-Multisensor DALI is a family of multisensors for lighting control in DALI systems, based on one device for bus systems to operate with a gateway for bus management, and an stand-alone device for direct management of luminaries, with no need of additional gateways or external devices.

The device is including a high sensitivity motion sensor, designed to automate the switching on and off function of the luminaries in a zone, depending of the occupancy status, and a light sensor to measure light levels and do a constant light control based, taking the advantage of the natural light inside the building, managing the light level of the luminaries to save as much energy as possible.

A patented mechanism based in two flanges fitted around the motion sensor lens, allows to adjust the covering area of the motion sensor depending on the device position, obtaining a better motion detection over the areas of interest and avoiding false detections in neighbouring areas. It can also be possible to adjust every flange separately, obtaining better results when the device is installed in zones like corridors, loft offices, etc…

The products are designed for flush mounting on a suspended ceiling providing a wide coverage area of 36m2 (installed at 3 m high), making it an ideal solution for loft offices.

Automatic on/off switching and light dimming

Motion detection area adjustable

Detection area 36m^2

Up to 75% energy saving

Energy saving in buildings

e-Multisensor Bus is an innovative multisensor including a high sensitivity motion detector, a light sensor and a temperature sensor for occupancy control, light level and temperature monitoring in a zone. A communication bus on the device allows transmitting the information to other devices on the network that actuate over the lighting components switching them on, off or dimming. A constant light controller is included on the device which is used to adjust light level according to the light setpoint configured and the combination of natural and artificial lighting. The motion sensor is used to automatically switch on and off the lights depending on the zone occupancy status, switching them off and saving energy when the zone is unoccupied.

Two different products are available with different communication media: LonWorks® twisted pair TP/FT-10 and LonWorks® PowerLine. Model for Lon TP/FT-10 networks is used with 1-10V output devices or DALI controller/gateways that are used to control the light dimming. The powerline model is using the mains electrical network as a transmission channel and is specially indicated for building refurbishment where no special cables are needed to install on the facility.

The products are designed for flush mounting on a suspended ceiling providing a wide coverage area of 36m2 (installed at 3 m high), making it an ideal solution for loft offices.

LonWorks communication

Energy Saving

- Light sensor for light dimming
- Motion sensor for automatic on/off switching
- Automatic light level control
- Up to 75% energy saving
- Constant light controller with two outputs for window and corridor lighting areas at the same time.
- Neighbor lighting control output.
- Minimum lighting value configurable.

Integration

- Providing EN15232 Class A
- ISO/IEC 14908 LonWorks® network
- LonMark® compatible
- Motion sensitivity adjustable by network
- In field sensor calibration with luxometer or by reflection index

LonMark Profiles

- 1 x Light Sensor
- 1 x Presence Detector
- 1 x Constant Light Controller
- 1 x Occupancy Controller
- 1 x Temperature Sensor

Installation

- TP/FT-10 with twisted pair bus
- PowerLine over mains electrical network

Features

- Supply Voltage:
  - TP/FT-10: 24 Vac/24 Vdc
  - PowerLine: 95-250Vac 50/60Hz
- TP/FT-10, PowerLine channel
- ISO/IEC 14908 LonWorks® network
- Detection area 6x6mts (installed at 3 m high)
- Max detection distance 8 meters
- 88 motion sensor detection zones
- Motion sensor coverage area 360º
- Lux range 0 to 1000 lux
- Light sensor measurement angle +/- 50º
- Light setpoint setting for automatic dimming
- Light sensor with visible color correction radiation filter
- Flush mounting in suspended ceiling
- Dimensions 80x50 (ØxH, mm)

Energy saving with control systems

The device is including a high sensitivity motion sensor used to detect smallest movements like hanging up the phone, picking up a pen, etc. to allow detect an occupied zone. It is designed to cover an area of 36m2, enough to fit a 4 to 6 people working place. A free contact relay output for the motion sensor is used to inform about the occupancy status of the zone to a digital input of the control system. When a movement is detected the relay output goes to the on state, actuating over the digital input of the system which will automatically switch on the lighting and the HVAC systems. After a period of inactivity on the zone, the relay will automatically turn to off and the control system will switch off the lighting and the HVAC systems for energy saving purposes. The switching off time can be configured by means of a potentiometer on the back side of the product.

A light sensor is also included on the device, sending the light level through a 0-10V analog output which will be sued for the control system for light dimming purposes, depending on the natural light level incident in the building. This control solution is providing an optimum light level on the building, saving the maximum energy as possible.

- Energy saving when zone is unoccupied
- Light dimming depending on natural lighting
- Adaptable to any control system
- May control the HVAC system

Sensors

e-Multisensor AutoDim 1-10V

Automatic light dimming in buildings

MS.503200-000

Stand-alone light dimming in buildings

e-Multisensor AutoDim 1-10V is a device that connects to a luminaire or group of luminaires for direct control. The device is powered at the mains electrical network voltage and a phase contact output relay is available for automatic light switching on and off depending on the zone occupancy state, providing an energy saving due to an automatic light switching off when the zone turns to unoccupied. A 1-10V output is available on the device for an automatic light dimming control, which is directly connected to the ballast or led driver of the luminaire.

Operating mode:

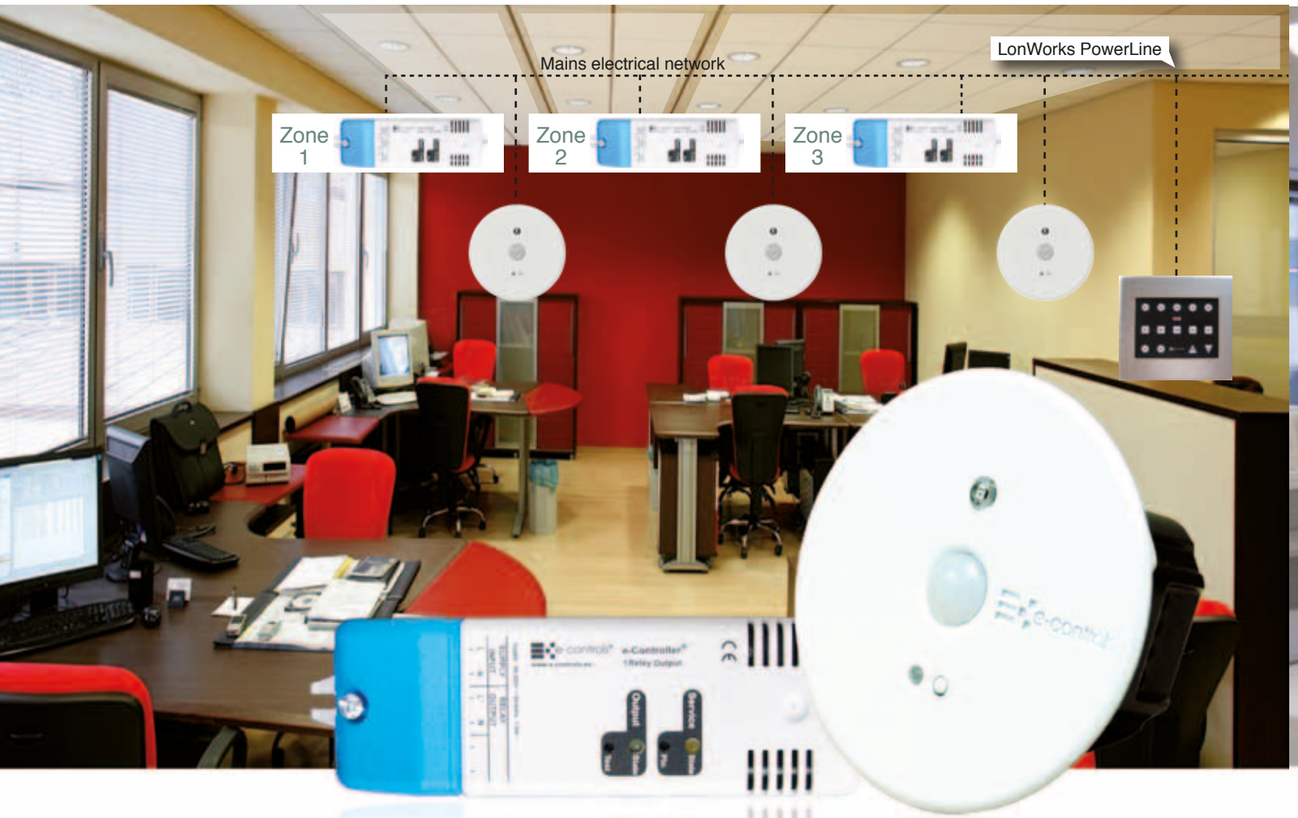
The lights automatically turns on when a movement is detected. At that moment the device dims the lights to a pre-defined setpoint value, ensuring the maximum energy saving as possible thanks to the digital control mechanism built in the device. When the zone goes to unouccupied, the lights turns to off after a pre-defined timeout has been expired.

An auxiliary external input can be configured for Scene control or manual lighting setpoint modification. When the input is configured for Scene control, the user can use an external switch button to bypass the sensors and fix a pre-defined light value on the zone i.e. for powerpoint presentations. When the input is configured in setpoint modification, the user can temporarily change the lighting setpoint using an external pushbutton, to increase or decrease the light level on the zone. The original setpoint will be again used after the lights will switch off and on again.

- Automatic light dimming
- Auto switching unoccuppied zones to off
- Adjustable switching off time
- Stand-alone control
- ON/OFF and AutoDim operating modes

Sensors | e-SaveLux

Automatic light dimming in buildings



EC.510200-000

MS.512000-000

Maximum savings, minimum installation

e-SaveLux is an innovative solution for automatic light dimming in buildings that provides up to 75% lighting energy savings and reduces installation costs by 25% with respect to traditional wired systems, as no additional wiring is required.

e-SaveLux consists of a multisensor network that incorporates presence and luminosity sensors to detect zone occupancy and measure room lighting levels and send the data to receivers that control luminaire light levels and provide the dimming function in order to achieve maximum energy saving at all times.

This system provides automatic lighting control by switching on and off the lights in different building zones depending on their occupancy and by dimming lighting to its optimum level as required in each situation. Particularly designed for rehabilitation and refurbishment of installations, this system is conceived for small to medium buildings, with no additional wiring requirements since it uses the electric mains to transmit data between the various devices in the installation.

- Automatic light dimming
- 75% lighting energy savings
- 25% savings on installation costs
- Meets building standards on energy saving
- No additional wiring to install
- No computer required for commissioning

Sensors | e-Multisensor Bus Lon TP/FT-10

Automatic light dimming in buildings

MS.623000-000

Integrated Lighting/Clima energy efficiency solution

There is a growing need for lighting and HVAC control in office building environments to get accurate energy savings, properly managing the services depending on the occupancy state and the natural lighting striking inside the building, to get the maximum energy saving as possible. There is a twofold objective: switching off the services on unoccupied zones and do an automatic light dimming to adjust the lighting at a predefined setpoint value.

In this application note, the e-Multisensor Bus TP/FT-10 device is measuring the light level of the zone and compares it with the predefined setpoint value, obtaining as a result the level at which the luminaires must be set. This result together with the zone occupancy status provided by the motion sensor is sent to the lighting control system for the dimming process. When people in a zone moves to other zone on the building, the motion sensor changes to unoccupancy mode and stops the HVAC system or turns it to ECO mode, switching off the lighting system or dimming it to a low level value.

The communication bus ensures the device integration with the building global management control system to allow the occupancy status and light level values monitoring through an SCADA application for a further analysis.

- Occupancy detection and Light sensor
- Maximum savings with constant light controller
- Automatic switch-off in unoccupied zones
- Integrable LonMark Open System
- LonWorks® TP/FT-10 network

Lighting energy saving in large areas

Multilux Bus is an innovative multisensor designed to be installed in large areas like industrial buildings, freezing areas, airports, outdoor lighting, etc., providing a lighting control based on motion detection and lighting dimming, giving a high energy saving switching lights off in unoccupied zones and dimming lights depending on the setpoint configured.

A very accurate motion sensor allows installing the device up to 18 metres high, being an ideal product for logistic areas and other buildings where there are few people and would be able to switch lights off. Two kinds of lens, one with 360º detection area and another with 180º detection for aisles, which allows selecting the correct product depending on the installation.
An integrated lighting sensor on the device measures the light level on the zone and adjusts it depending on the daylight level inside the building and setpoint configured.

There are three product references: DALI, TP/FT-10 LonWorks twisted pair and PowerLine to communicate through electrical mains. The LonWorks models include all needed functions for automatically lighting control. The DALI one is used with a DALI gateway in a system.

The device can operate down to -25ºC and is mounted in an IP65 surface mounting enclosure, designed to be installed in hostile environments like freezing warehouses and outdoor lighting.

Height detection up to 18 metres

Motion sensitivity adjustable by network

Lighting range 0 to 500 lux

Operating range -25ºC a +50ºC

Industry | e-Controller 2In2Out Autoinstall

Switching contacts remote control through the mains electrical network

Remote sensors control and relay outputs with no new wires

DATASHEET

e-controls® electronic intelligent controls, s.l.

EC.512207-000

Inputs and outputs remotely controllable with no new wires

The **e-Controller 2In2Out Autoinstall** is a device designed to do a remote control of its outputs relays from the input contacts of an equivalent remote e-Controller. With this system it is possible to monitor the input status of the remote device watching at the values on the outputs of the near device.

A data transmission system that takes the advantage of using the mains electrical network as a transmission channel is used on the device to communicate with other devices, making it particularly interesting on places where additional wires are difficult or impossible to install for cost reasons.

The digital inputs of the device can be configured to work as pushbuttons or switch contacts. Some pushbuttons and led indicators are included on the front panel of the device to test the outputs and monitor the inputs status. An auto-installation mechanism is included on the device for input and output logical connections up to 26 devices, with no computer required for commissioning.

The system has multiple applications both in industry and buildings: water level status monitoring in pump wells, motor on-off remote control, machinery switching on and off, etc.

- Input contacts remote monitoring
- Relay outputs remote switching
- No computer required for commisioning
- No additional wiring required for data transmission
- Robust and reliable transmission
- LonWorks® network

Remote Control

- Input contacts status monitoring
- Remote outputs direct control
- Data transmission reliable

BMS monitoring and control

- Inputs status monitoring in SCADA application
- Output relay status control

Integration

- ISO/IEC 14908 LonWorks® network
- LonMark® compatible

Installation

- Data transmission using the mains electrical network
- No computer required for commisioning

Features

- Supply Voltage 95-250Vac 50/60Hz
- Two phase contact digital inputs
- Digital inputs configurable as pushbutton or contact
- Two phase contact 5Amp relay outputs
- Input status LED indicators
- Outputs test pushbuttons and outputs status LED indicators
- Auto-intallation mechanism between e-Controllers
- Mains electrical network for data transmission (PowerLine)
- ISO/IEC 14908 LonWorks® network
- LonMark® Open Systems integrable

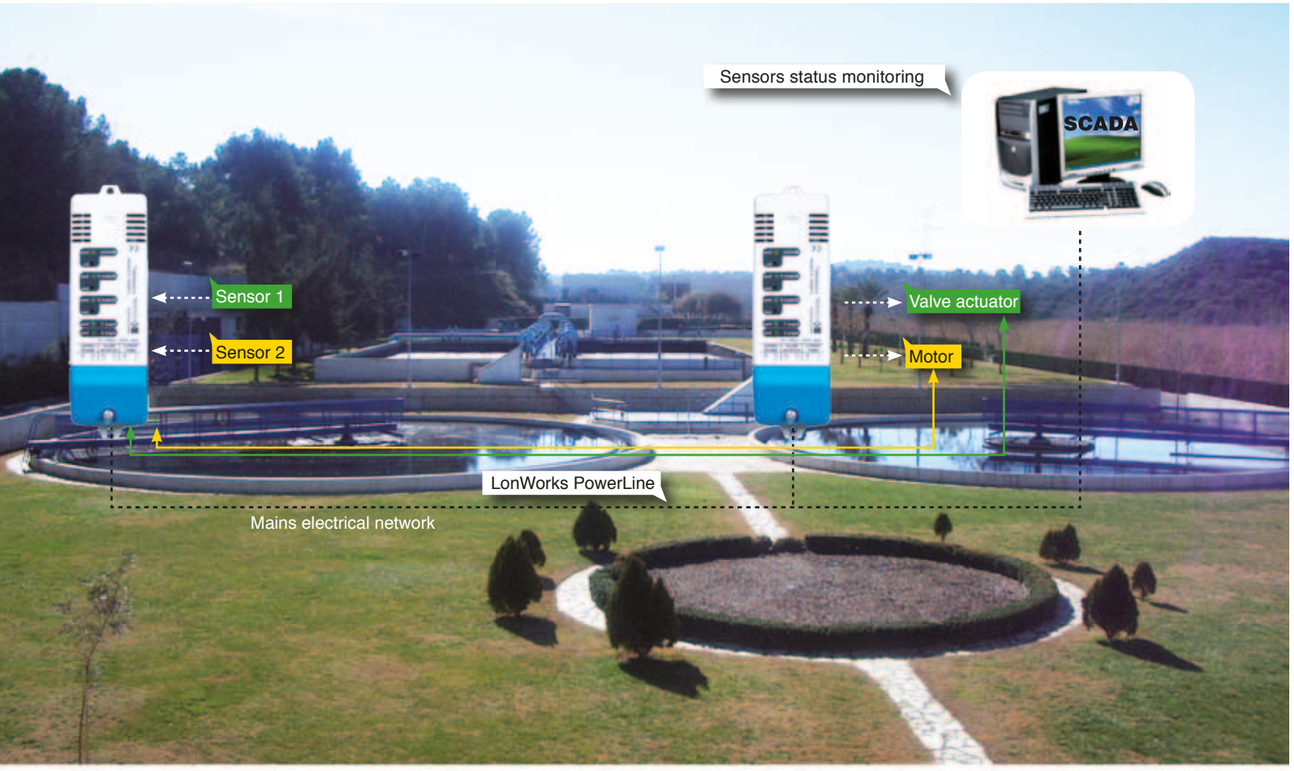
Industry

e-Controller 2In2Out Autoinstall

Remote sensors control through the mains electrical network

1 Application Water Treatment Plant



Control signals transmission using the mains electrical network

The aim of this application note is to transmit the sensors status signals connected to an e-Controller device to another remote e-Controller device that will show on its relay outputs the inputs status connected on the first device. The main advantage of this application note is the control transmission system between the e-Controller devices which are using the mains electrical network, preventing to install new wires for the communication, which in most cases are not possible.

Two digital inputs are available on the **e-Controller 2In2Out Autoinstall** device to which different sensors are connected for the plant control, with the aim to transmit the inputs status to another e-Controller with two relay outputs available to monitor the inputs status of the remote e-Controller. No computer is required for commissioning since an advanced algorithm is included on the e-Controller devices to automatically configure the logical addresses between the digital inputs of one e-Controller transmitter and the output or outputs of one or more e-Controllers receivers. This mechanism is done using the mains electrical network and can be extended with up to 26 different devices with the auto-installation system.
